From Brand: Edward Elgar Pub : Antitrust And Competition Policy (Business Economics Series) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Antitrust And Competition Policy (Business Economics Series):

The antitrust litigation process is, to a large and perhaps surprising degree, driven by the underlying economic literature. The articles in this volume have been chosen to provide a sense of both the history and the current state of

thinking about antitrust. The opening section considers the flaws in the 1960s view on monopoly. Part II then examines economic thinking with respect to mergers. The next three sections contain selections on three specific sets of practices that have been frequent targets of antitrust scrutiny. Part VI examines perspectives on exclusionary behavior. Part VII studies the literature on network externalities. The final part explores works in the area of bureaucracy and politics. This insightful volume will be a valuable source of reference for both economists and lawyers concerned with antitrust and competition issues.

'It is most welcome to see classic law and economics pieces by Harold Demsetz, Oliver Williamson, Lester Telser, George Stigler and other giants of the field together in one volume along with newer and more enforcement oriented voices. . . Antitrust and Competition Policy fills an important need for both attorneys and economists in their continuing collaboration in the competition field. . . provides a comprehensive collection of the major voices and views that have shaped our profession over the past 50 years.' -- Spencer Weber Waller, World Competition
About the Author
