**From Organization For Economic Co-Operation Development : Energy Policies Of IEA Countries: Hungary 2011** before purchasing it in order to gage whether or not it would be worth my time, and all praised Energy Policies Of IEA Countries: Hungary 2011:

Since the IEA last reviewed Germanys energy policies in 2007, the country has taken two fundamental policy decisions that will guide its energy policy in coming decades. In September 2010, the federal government adopted the Energy Concept, a comprehensive new strategy for a long-term integrated energy pathway to 2050. Following the Fukushima Daiichi nuclear accident in March 2011, Germany decided to accelerate the phase-out of nuclear power by 2022 starting with the immediate closure of the eight oldest plants. This decision resulted in the adoption of a new

suite of policy measures, determined renewable energy as the cornerstone of future energy supply, a set of policy instruments commonly known as the Energiewende. In order to achieve the ambitious energy transformation set out in the Energiewende, by 2030 half of all electricity supply will come from renewable energy sources; Germany must continue to develop cost-effective market-based approaches which will support th
