this book is written in such a simplistic manner that I probably could have found everything needed to conduct my own Phase I ESA by googling it or looking it up on Wikipedia. Another example of the simplicity of this book is all illustrations in the book are hand-drawn by a novice. She didn't even hire a graphics illustrator to make a few simple but professional illustrations. In addition, the book is waaaaay overpriced. A comparable book at a bookstore should be around \$30 max. Bottom line, this book doesn't provide any information that cannot be found with a simple search on the internet. Unless your college professor requires you to purchase this book, save your money and google the info. 0 of 0 people found the following review helpful.
